I am a computer science graduate and have one year of management, software development and business analyst experience. I'm collaborating with the team work and the product manager as a product owner to assist delivery throughout all stages of the product life cycle, and managing product backlogs to establish strategies. The best part of myself is, that I have lots of patience. I never give up until things make right. I love to learn new things that make me dynamic.

Skills

- Project management (Jira, Trello, UML)
- Requirements engineering
- Communication skill
- Process Modeling
- Software Development, Quality Assurance Testing

November 2021 – October 2022

Projects

Restaurant Management System

Build: C++

Type: Console

Short Description : This project is basically supports critical business functions necessary to manage a restaurant. It puts your payroll, inventory, accounting, and customer management data in one spot. Some point-of-sale systems double as an RMS, or you may purchase loyalty or online ordering solutions separately.

Student Management System

Build: java

Type: Console, User Interface

Short Description : These systems work to coordinate scheduling and communications between faculty regarding students. This system exists to simplify information tracking for both parents and administrative staff.

Bank Management System

Build: C#

Type: User Interface

Short Description : These system is a set of essential tools and processes that allow banks and their credit institutions to carry out their functions. The components of the bank management system may differ depending on the bank, but generally, the system includes core banking to manage basic transactions, loans, mortgages, and payments accessible via ATM, mobile banking, and branches.

Criminal Management System

Build: HTML, CSS, Javascript, Php, Mysql

Type: Web Application

Short Description : These system is a tool which helps the jailor to manage the details of the crimes happening in the city as well as keep an eye on the records of the criminals along with their past records which can be seen with just one click through this system. It shows the details of the prisoner along with the personal information and to whom to connect at the time of emergency.

Travel Management System

Build: ASP.NET, Mysql

Type: Web Application

Short Description: These system is one of the best applications that will help the customers to book the air ticket or the railway tickets through this application of the travel agency. Booking of tickets will be done with great ease and without any difficulty. The user interface must be easy and accessible to understand.
